DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims drawn to 1-16, 17-20 classified in class 375, subclass 232-234.
 - II. Claims 21-28, drawn to a method for providing a bandwidth estimate, classified in class 375, subclass 240.
 - III. Claims 29-33, drawn to a method for providing a channel identification, classified in class 375, subclass 144, 346.
 - IV. Claims 34-35, 38-39, drawn to a method for providing an optical-signal-to-noise ratio, classified in class 398, subclass 26.
 - V. Claims 36-37, drawn to a method for providing a bit error rate estimate, classified in class 398, subclass 27.
 - VI. Claims 40-43, drawn to a method for providing a chromatic dispersion estimate, classified in class 398, subclass 147, 148.
 - VII. Claims 44-45, drawn to a method for providing a polarization mode dispersion estimate, classified in class 398, subclass 29.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions 1-16, 17-20 and 21-28; 29-33; 34-35, 38-39; 36-37; 40-43; 44-45 are directed and related to an equalizer. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In

Art Unit: 2611

the instant case, the inventions as claimed have different modes of operation and are not obvious variants. Applicant has presented an equalizer and several modes of operation of the equalizer which are not obvious variants of the equalizer. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.
